

Cruciform with Starlight Linings

The Cruciform joins two coverspan structures at 90° to give full ground to ridge clearance and a great interior space. The Cruciform replaces the central roof beam and purlins of one tent with an extension of the other tent's ridge beam. The PVC roof is one complete section that covers the join and can come in both clear or plain PVC.

Available in 9m to 9m and 9m to 12m variants.

Key Features

- Cost effective way to join tents
- Minimal assembly - small number of additional parts
- Compatible with existing Coverspan frames
- Removes the need for guttering between structures
